# Subject Index

VOLUME 19, 2002

- Activated protein C resistance (APCR)  
Factor V Leiden mutation, pregnancy complications, 37–45  
maternal floor infarction, low-molecular-weight heparin therapy, 273–277
- Adhesion molecules, soluble ICAM-1, neonatal and maternal serum levels, preeclampsia and normal pregnancies, 333–339
- Air emboli, neonatal intracranial venous sinuses, 55–58
- "Air leak syndrome" (ALS). *See* Pulmonary interstitial emphysema (PIE)
- Akinesia, fetal-onset neonatal myasthenia, 297–300
- Aminoglycosides, dosing regimens, gentamicin and tobramycin, extended interval *vs.* traditional multiple daily dosing, 413–418
- Amniotic fluid  
isolated oligohydramnios dynamics, 253–263  
meconium aspiration, delivery room risk factors, 367–376  
persistent hyperinsulinemic hypoglycemia of infancy (PHHI), antepartum findings, 163–168
- Aneurysm, pregnancy-related vascular emergency, 241–246
- Antepartum testing, persistent hyperinsulinemic hypoglycemia of infancy (PHHI), 163–168
- Antibiotic prophylaxis, neonatal group B streptococcus (GBS) disease, prevention strategies, 341–347
- Anticoagulant therapy, Factor V Leiden mutation, pregnancy outcome, 41–45
- Anti-La antibodies, fetal echocardiographic screening in anti-Ro and/or anti-La antibody mothers, 73–77
- Antioxidants, hyperemesis gravidarum (HG) and oxidative stress, 93–97
- Anti-Ro antibodies, fetal echocardiographic screening in anti-Ro and/or anti-La antibody mothers, 73–77
- Apoptosis, cord blood neutrophils, apoptosis and response to colony-stimulating factors, 427–432
- Arnold-Chiari type I malformation, maternal, labor management issues, 445–448
- Arterial/alveolar PO<sub>2</sub> ratio, functional residual capacity (FRC) and surfactant response in preterm infants, 155–161
- Arthrogryposis, fetal-onset neonatal myasthenia, 297–300
- Asphyxia, perinatal asphyxia and periventricular white matter lesions, protein S-100 serum levels, 317–321
- Assisted reproductive technology (ART), fetal outcome studies, 59–64
- Birth weight, maternal and paternal age, Caucasian and Native American populations, effects on, 49–54
- Bladder complications, Potter sequence, congenital cystic bladder lesion complication, 267–271
- Brain echolucency, transient hypothyroxinemia of prematurity (THOP), abnormal ultracranial ultrasound and illness severity, 139–146
- Breast engorgement, preterm labor magnesium sulfate therapy, 239–240
- Bronchopulmonary dysplasia (BPD), low-birth-weight infants, leukemoid reaction and bronchopulmonary dysplasia, 379–385
- Calcium balance, extremely preterm infants, estradiol/progesterone replacement, 23–28

- Car seats, preterm infants in, in car seats, head support and oxygen saturation effects, 115–117
- Caucasian populations, maternal/paternal age, effects on preterm birth and birth weight in, 49–54
- Cerebrospinal fluid (CSF), febrile neonates, lactic dehydrogenase reference values and isoenzyme distribution, 109–114
- Cesarean delivery (CS)
  - external cephalic version (ECV) and, 355–359
  - maternal age and, 1–6
- Colony-stimulating factors (CSF), cord blood
  - neutrophil apoptosis and response, 427–432
- Computed tomography (CT) imaging, pulmonary interstitial emphysema (PIE), spontaneous breathing in preterm infant, 285–289
- Congenital complete heart block (CCHB), fetal screening in anti-Ro and/or anti-La antibody mothers, 73–77
- Continuous hemodiafiltration (CHDF), neonatal onset hyperammonemia, 221–224
- Coping strategies, family reactions during infant NICU hospitalization, 205–213
- Cord blood. *See* Umbilical cord blood
- Cranial epidural hematoma, vacuum extraction complication, ultrasound-guided needle aspiration, 401–404
- Craniosynostosis, fetal-onset neonatal myasthenia, 297–300
- Cystic bladder, Potter sequence, congenital cystic bladder lesion complication, 267–271
- Cystic lung disease, pulmonary interstitial emphysema (PIE), spontaneous breathing in preterm infant, CT imaging, 285–289
- Delivery complications**
  - external cephalic version, delivery following, 355–359
  - maternal age and, 1–6
  - meconium aspiration
    - neutrophil oxidative burst, 279–283
    - risk factors, 367–376
  - respiratory distress syndrome (RSD) risk, elective delivery, 81–85
  - ultrasound-guided needle aspiration of neonatal cranial epidural hematoma, vacuum extraction complication, 401–404
- Diagnosis**
  - Helicobacter pylori* seropositivity in hyperemesis gravidarum, symptom correlation, 87–92
- intrauterine growth restriction (IUGR),
  - ultrasound diagnosis, parameter comparisons, 133–136
- intrauterine synechnia, doppler velocimetry assisted diagnosis, 421–424
- Diuretics, hypertensive disorders of pregnancy, postpartum renal failure and pancreatitis, 177–179
- Doppler ultrasound, placental abruption, reproductive risk factors, Doppler findings, population-based analysis, 451–458
- Doppler velocimetry, intrauterine synechnia, diagnosis using, 421–424
- Dosing guidelines, gentamicin and tobramycin, extended interval *vs.* traditional multiple daily dosing, 413–418
- Double basket catheterization, primary fetal hydrothorax, 405–410
- Down Syndrome, social stigma of, 99–107
- Echocardiography
  - fetal screening in anti-Ro and/or anti-La antibody mothers, 73–77
  - Staphylococcus aureus* endocarditis in preterm neonates, 247–251
- Elective delivery, respiratory distress syndrome (RSD) risk and, 81–85
- Endocarditis, *Staphylococcus aureus* endocarditis in preterm neonates, 247–251
- Epidural anesthesia, fetal intrapartum oxygen saturation, 119–125
- Episiotomy, perineal tear risk factors, 225–233
- Estradiol replacement, extremely preterm infants, calcium/phosphorus balance, 23–28
- Ethics**
  - neonatal ventilation facilities in Illinois and Wisconsin, regionalization of neonatal care and, 197–202
  - social attitudes toward Down Syndrome children, 99–107
- External cephalic version (ECV), delivery procedures following, 355–359
- Extravasation complications, spontaneous renal pelvis rupture, 189–194
- Extreme prematurity. *See also* Preterm births
  - calcium/phosphorus balance, estradiol and progesterone replacement, 23–28
  - management trends, 9–14

- Factor V Leiden mutation (FVL)  
 activated protein C resistance (APCR), maternal  
 floor infarction, low-molecular-weight heparin  
 therapy, 273–277  
 pregnancy complications, 37–45
- Familial pulmonary lymphatic hypoplasia, fetal hydrops  
 and, 323–330
- Family coping strategies, family reactions during infant  
 NICU hospitalization, 205–213
- Fava beans, neonatal nucleated red blood cells and  
 G6PD deficiency, 215–218
- Fetal heart rate (FHR), maternal epidural anesthesia  
 and fetal intrapartum oxygen saturation,  
 119–125
- Fetal hemolysis, neonatal nucleated red blood cells and  
 G6PD deficiency, 215–218
- Fetal-onset neonatal myasthenia, presentation and  
 outcome, 297–300
- Fetal viability and demise. *See also* Neonatal survival;  
 Perinatal outcome  
 extreme prematurity, management trends, 9–14  
 hydrops and familial pulmonary lymphatic  
 hypoplasia, 323–330  
 maternal floor infarction, activated protein C  
 resistance (APCR), low-molecular-weight  
 heparin therapy, 273–277  
 placental abruption, reproductive risk factors, Doppler  
 findings, population-based studies, 451–458  
 primary aldosteronism in pregnancy, diagnosis and  
 management, 31–35  
 primary fetal hydrothorax, double basket  
 catheterization, 405–410  
 Fever in neonates, lactic dehydrogenase reference values  
 and isoenzyme distribution in cerebrospinal fluid  
 (CSF), 109–114  
 Fiberoptic phototherapy, hyperbilirubinemic neonates,  
 conventional *vs.* fiberoptic phototherapy, skin  
 temperature changes, 439–442  
 Functional residual capacity (FRC), surfactant response  
 in preterm infants and, 155–161
- Galactorrhea, preterm labor magnesium sulfate therapy,  
 239–240
- Gastric duplication (GD), neonatal pneumoperitoneum  
 and vertebral anomalies, gastric duplication cyst  
 presentation, 361–365
- Gastroesophageal reflux, laryngotracheo-esophageal  
 cleft (LTEC) repair, survivor studies, 181–186
- Genamicin, dosing regimens, extended interval *vs.*  
 traditional multiple daily dosing, 413–418
- Geographic factors  
 regionalization of neonatal care, ventilation facilities  
 in Illinois and Wisconsin, 197–202  
 varicella immune status in obstetric population, place  
 of birth and, 387–393
- Gestational age  
 extreme prematurity, management trends, 9–14  
 respiratory distress syndrome (RSD), elective delivery  
 and, 81–85
- Glucose-6-phosphate dehydrogenase deficiency,  
 neonatal nucleated red blood cells and, 215–218
- Glutathione reduction, hyperemesis gravidarum (HG)  
 and oxidative stress, 93–97
- Granulocyte-colony-stimulating factor (G-CSF)  
 cord blood neutrophils, apoptosis and response to  
 colony-stimulating factors, 427–432  
 low-birth-weight infants, bronchopulmonary  
 dysplasia and leukemoid reaction, 379–385
- Group B streptococcus (GBS) disease, prevention  
 strategies, neonatal outcome, 341–347
- Head support, preterm infants in car seats, oxygen  
 saturation effects with, 115–117
- Helicobacter pylori*, seropositivity in hyperemesis  
 gravidarum, symptom correlation, 87–92
- Heparin therapy, maternal floor infarction, activated  
 protein C resistance (APCR), 273–277
- Hepatoblastoma, very low birth weight (VLBW)  
 children, 149–152
- Herpes simplex virus (HSV), acyclovir therapy, preterm  
 premature membrane rupture, 235–237
- Hormone replacement, extremely preterm infants,  
 calcium/phosphorus balance, 23–28
- Hyaline membrane disease (HMD), functional residual  
 capacity (FRC) and surfactant response in  
 preterm infants, 155–161
- Hydrops  
 familial pulmonary lymphatic hypoplasia, 323–330  
 primary fetal hydrothorax, double basket  
 catheterization, 405–410
- Hyperammonemia, in neonates, continuous venovenous  
 hemodiafiltration, 221–224
- Hyperbilirubinemic neonates, conventional *vs.*  
 fiberoptic phototherapy, skin temperature  
 changes, 439–442
- Hyperemesis gravidarum (HG)

- Helicobacter pylori* seropositivity, symptom correlation, 87-92  
 oxidative stress and, 93-97
- Hypertensive disorders of pregnancy  
 Factor V Leiden mutation, 41-45  
 postpartum renal failure and pancreatitis, 177-179
- Iatrogenic prematurity, respiratory distress syndrome (RSD), elective delivery and, 81-85
- Illness severity ratings, transient hypothyroxinemia of prematurity (THOP), abnormal ultracranial ultrasound and, 139-146
- Incidence studies, neonatal clavicular fracture, 17-21  
 Intracranial venous sinuses, neonatal, air emboli in, 55-58
- Intracytoplasmic sperm injection (ICSI), fetal outcome studies, 59-64
- Intrauterine fetal death (IUFD), maternal age and, 1-6  
 Intrauterine growth restriction (IUGR)  
 Factor V Leiden mutation, 41-45  
 ultrasound diagnosis, parameter comparisons, 133-136
- Intrauterine synechiae, doppler velocimetry assisted diagnosis, 421-424
- In vitro fertilization (IVF), fetal outcome studies, 59-64
- Isoenzyme patterns, lactic dehydrogenase reference values in cerebrospinal fluid of febrile neonates, 109-114
- Labor complications  
 maternal Arnold-Chiari type I malformation, management issues, 445-448  
 maternal epidural anesthesia and fetal intrapartum oxygen saturation, 119-125  
 preterm labor, magnesium sulfate therapy, breast engorgement and galactorrhea, 239-240
- Lactic dehydrogenase (LDH), reference values in cerebrospinal fluid of febrile neonates, 109-114
- Laryngotracheo-esophageal cleft (LTEC), repair, survivor studies, 181-186
- Leptin, preeclampsia and leptin physiology disruption, 303-309
- Leukemoid reaction, low-birth-weight infants, bronchopulmonary dysplasia and, 379-385
- Low birth weight (LBW)  
 maternal and paternal age, Caucasian and Native American populations, effects on, 49-54  
 neonatal leukemoid reaction and bronchopulmonary dysplasia, 379-385
- transient hypothyroxinemia of prematurity (THOP), abnormal ultracranial ultrasound and illness severity, 139-146
- Low-molecular-weight heparin, maternal floor infarction, activated protein C resistance (APCR), 273-277
- Lung injury. *See also* Respiratory distress syndrome (RSD)  
 fetal hydrops and familial pulmonary lymphatic hypoplasia, 323-330  
 low-birth-weight infants, bronchopulmonary dysplasia and leukemoid reaction, 379-385  
 meconium aspiration, neutrophil oxidative burst, 279-283
- Macrosomia, persistent hyperinsulinemic hypoglycemia of infancy (PHHI), antepartum findings, 163-168
- Macrotrabecular pattern, hepatoblastoma in very low birth weight (VLBW) children, 149-152
- Magnesium sulfate therapy, preterm labor, breast engorgement and galactorrhea, 239-240
- Maternal age  
 pregnancy outcome and, 1-6  
 preterm births and birth weight, effects in Caucasian and Native American populations, 49-54
- Maternal floor infarction, activated protein C resistance (APCR), low-molecular-weight heparin therapy, 273-277
- Mechanical ventilation facilities, in Illinois and Wisconsin, regionalization of neonatal care and, 197-202
- Meconium aspiration syndrome (MAS)  
 delivery room risk factors, 367-376  
 neutrophil oxidative burst, 279-283
- Metoclopramide therapy, pregnancy-related nausea and vomiting, multicenter international study, 311-315
- Mineral balance, extremely preterm infants, estradiol/progesterone replacement, 23-28
- Morbidity and mortality studies, perinatal mortality, maternal type I diabetes mellitus, 169-175
- Multilocular bladder, Potter sequence, congenital cystic bladder lesion complication, 267-271
- Multiple gestation, maternal serum uric acid concentration and, 291-295
- Myasthenia disorders, fetal-onset neonatal myasthenia, 297-300
- Native American populations, maternal/paternal age, effects on preterm birth and birth weight in, 49-54

- Nausea and vomiting, of pregnancy, metoclopramide therapy, multicenter international study, 311–315
- Neonatal intensive care unit (NICU)
- Down Syndrome children, social attitudes toward, 99–107
  - family reactions during infant hospitalization, 205–213
  - regionalization of, ventilation facilities in Illinois and Wisconsin, 197–202
  - unlicensed and off-label medications, prospective study, 67–72
- Neonatal lupus erythematosus (NLE), fetal screening in anti-Ro and/or anti-La antibody mothers, 73–77
- Neonatal onset hyperammonemia, continuous venovenous hemodiafiltration, 221–224
- Neonatal survival. *See also* Fetal viability and demise; Perinatal outcome
- assisted reproductive technology (ART) and, 59–64
  - extreme prematurity, management trends, 9–14
  - fetal hydrops and familial pulmonary lymphatic hypoplasia, 323–330
  - fetal-onset neonatal myasthenia, 297–300
  - group B streptococcus (GBS) disease, prevention strategies, 341–347
  - meconium aspiration, delivery room risk factors, 367–376
  - placental abruption, reproductive risk factors, Doppler findings, population-based studies, 451–458
  - tracheal agenesis, case studies and literature review, 395–399
- Neonatal therapeutic intervention scoring system (NTISS), transient hypothyroxinemia of prematurity (THOP), abnormal ultracranial ultrasound and illness severity, 139–146
- Neonates
- air emboli in intracranial venous sinuses, 55–58
  - clavicular fracture, incidence, predisposing factors, diagnosis, and outcome, 17–21
  - cranial epidural hematoma, vacuum extraction complication, ultrasound-guided needle aspiration, 401–404
  - dosing regimens, gentamicin and tobramycin, extended interval *vs.* traditional multiple daily dosing, 413–418
  - G6PD deficiency in, nucleated red blood cells, 215–218
  - hyperbilirubinemic neonates, conventional *vs.* fiberoptic phototherapy, skin temperature changes, 439–442
  - lactic dehydrogenase reference values in cerebrospinal fluid of febrile neonates, 109–114
- laryngotracheo-esophageal cleft repair, survivor studies, 181–186
- parotid swelling in premature neonates, 435–437
- pneumoperitoneum and vertebral anomalies, gastric duplication cyst presentation, 361–365
- polycythemia, partial exchange transfusion, maternal smoking and, 349–353
- soluble ICAM-1 serum levels, preeclampsia and normal pregnancies, 333–339
- Staphylococcus aureus* endocarditis in preterm neonates, 247–251
- Neutrophils
- cord blood neutrophils, apoptosis and response to colony-stimulating factors, 427–432
  - meconium aspiration, neutrophil oxidative burst, 279–283
- Obesity, maternal, preeclampsia and leptin physiology disruption, 303–309
- Obstetric practice issues
- extreme prematurity, management trends, 9–14
  - maternal Arnold-Chiari type I malformation, labor management issues, 445–448
  - meconium aspiration, delivery room risk factors, 367–376
  - varicella immune status in obstetric population, place of birth and, 387–393
- Off-label medications, neonatal intensive care unit (NICU), prospective studies, 67–72
- Oligohydramnios
- amniotic fluid dynamics, isolated oligohydramnios, 253–263
  - Potter sequence, congenital cystic bladder lesion, 267–271
- Orphan drugs, neonatal intensive care unit (NICU), prospective studies, 67–72
- Outcome studies
- assisted reproductive technology (ART), neonatal outcome, 59–64
  - Factor V Leiden mutation, 41–45
  - maternal age and perinatal outcome, 1–6
  - neonatal clavicular fracture, 17–21
  - umbilical cord knots and pregnancy outcome, population-based analysis, 127–131
- Oxidative stress
- hyperemesis gravidarum (HG) and, 93–97
  - meconium aspiration, neutrophil oxidative burst, 279–283

- Oxygen saturation  
 maternal epidural anesthesia and fetal intrapartum saturation, 119–125  
 preterm infants in car seats, effect of head support on, 115–117
- Pancreatic hyperplasia, persistent hyperinsulinemic hypoglycemia of infancy (PHHI), 163–168
- Pancreatitis, hypertensive disorders of pregnancy, postpartum renal failure and pancreatitis, 177–179
- Parotid swelling, in premature neonates, 435–437
- Partial exchange transfusions, neonatal polycythemia, maternal smoking and, 349–353
- Paternal age, preterm births and birth weight, effects in Caucasian and Native American populations, 49–54
- Pediatric practice issues  
 dosing regimens, gentamicin and tobramycin, extended interval *vs.* traditional multiple daily dosing, 413–418  
 Down Syndrome children, social attitudes towards, 99–107  
 tracheal agenesis, case studies and literature review, 395–399
- Perinatal outcome. *See also* Fetal viability and demise; Neonatal survival  
 asphyxia and periventricular white matter lesions, serial protein S-100 serum levels, 317–321  
 intrauterine growth restriction (IUGR), ultrasound diagnosis, parameter comparisons, 133–136  
 isolated oligohydramnios, amniotic fluid dynamics, 253–263  
 maternal age and, 1–6  
 neonatal clavicular fracture, 17–21  
 Potter sequence, congenital cystic bladder lesion complication, 267–271  
 type I diabetic mothers, perinatal mortality, 169–175
- Perineal tear, risk factors, 225–233
- Persistent hyperinsulinemic hypoglycemia of infancy (PHHI), antipartum findings and obstetrical aspects, 163–168
- Pharmacokinetics, dosing regimens, gentamicin and tobramycin, extended interval *vs.* traditional multiple daily dosing, 413–418
- Phosphorus balance, extremely preterm infants, estradiol/progesterone replacement, 23–28
- Phototherapy, hyperbilirubinemic neonates, conventional *vs.* fiberoptic phototherapy, skin temperature changes, 439–442
- Placental abruption  
 Factor V Leiden mutation, 41–45  
 reproductive risk factors, Doppler findings, population-based analysis, 451–458
- Plasma aldosterone concentration (PAC), primary aldosteronism in pregnancy, diagnosis and management, 31–35
- Plasma renin activity (PRA) values, primary aldosteronism in pregnancy, diagnosis and management, 31–35
- Pneumoperitoneum, neonatal pneumoperitoneum and vertebral anomalies, gastric duplication cyst presentation, 361–365
- Polycythemia, partial exchange transfusion in neonates, maternal smoking and, 349–353
- Population-based studies, placental abruption, reproductive risk factors, Doppler findings, 451–458
- Postpartum complications  
 breast engorgement and galactorrhea, preterm labor magnesium sulfate therapy, 239–240  
 hypertensive disorders of pregnancy, postpartum renal failure and pancreatitis, 177–179  
 Potter sequence, congenital cystic bladder lesion complication, 267–271
- Preeclampsia  
 leptin physiology, disruption of, 303–309  
 maternal serum uric acid concentration, multifetal gestation and, 291–295  
 neonatal and maternal soluble ICAM-1 serum levels, 333–339
- Pregnancy complications  
 activated protein C resistance (APCR), maternal floor infarction, low-molecular-weight heparin therapy, 273–277  
 factor V Leiden mutation, review, 37–45  
 fetal hydrops and familial pulmonary lymphatic hypoplasia, 323–330  
 hyperemesis gravidarum (HG), *Helicobacter pylori* seropositivity, symptom correlation, 87–92  
 hyperemesis gravidarum (HG), oxidative stress and, 93–97  
 hypertensive disorders of pregnancy, postpartum renal failure and pancreatitis, 177–179  
 intrauterine synechnia, doppler velocimetry assisted diagnosis, 421–424  
 isolated oligohydramnios, amniotic fluid dynamics, 253–263  
 maternal age and, 1–6

- maternal serum uric acid concentration, fetal number effects, 291–295
- nausea and vomiting, metoclopramide therapy, multicenter international study, 311–315
- neonatal polycythemia, partial exchange transfusion, maternal smoking and, 349–353
- perineal tear risk factors, 225–233
- Potter sequence, congenital cystic bladder lesion complication, 267–271
- preeclampsia and leptin physiology disruption, 303–309
- preterm membrane rupture, primary herpes therapy, 235–237
- primary aldosteronism, diagnosis and management, 31–35
- renal pelvis spontaneous rupture, case report and literature review, 189–194
- soluble ICAM-1, neonatal and maternal serum levels, preeclampsia and normal pregnancies, 333–339
- type I diabetic mothers, perinatal mortality, 169–175
- umbilical cord knots, population-based analysis, 127–131
- varicella immune status and place of birth, 387–393
- vascular emergency, 241–246
- Pregnancy-induced hypertension (PIH).** *See* Hypertensive disorders of pregnancy
- Pregnancy loss, Factor V Leiden mutation, 40–45
- Pregnancy outcome**
- maternal age and, 1–6
  - neonatal clavicular fracture, 17–21
  - persistent hyperinsulinemic hypoglycemia of infancy (PHHI), antepartum findings, 163–168
  - type I diabetic mothers, perinatal mortality, 169–175
  - umbilical cord knots and, population-based analysis, 127–131
- Premature rupture of membranes, acyclovir therapy for primary herpes, 235–237
- Preterm births.** *See also* Extreme prematurity
- family reactions during infant NICU hospitalization, 205–213
  - functional residual capacity (FRC) and surfactant response, 155–161
  - hepatoblastoma in very low birth weight (VLBW) children, 149–152
  - maternal age and, 1–6
  - maternal and paternal age, Caucasian and Native American populations, effects on, 49–54
  - neonatal complications, air emboli in intracranial venous sinuses, 55–58
- parotid swelling in premature neonates, 435–437
- perinatal asphyxia and periventricular white matter lesions, serial protein S-100 serum levels, 317–321
- premature rupture of membranes, acyclovir therapy for primary herpes, 235–237
- pulmonary interstitial emphysema (PIE), spontaneous breathing in preterm infant, CT imaging, 285–289
- Staphylococcus aureus* endocarditis in preterm neonates, 247–251
- transient hypothyroxinemia, abnormal ultracranial ultrasound and illness severity, 139–146
- Preterm infants, in car seats, head support and oxygen saturation in, 115–117
- Preterm labor, magnesium sulfate therapy, breast engorgement and galactorrhea, 239–240
- Primary aldosteronism, in pregnancy, diagnosis and management, 31–35
- Primary fetal hydrothorax, double basket catheterization, 405–410
- Primary herpes.** *See* Herpes simplex virus (HSV)
- Progesterone replacement, extremely preterm infants, calcium/phosphorus balance, 23–28
- Prospective drug studies, unlicensed and off-label medications, neonatal intensive care unit (NICU), 67–72
- Protein S-100, perinatal asphyxia and periventricular white matter lesions, serum levels of, 317–321
- Pulmonary interstitial emphysema (PIE), CT imaging, spontaneous breathing in preterm infant, 285–289
- Pulse oximetry, maternal epidural anesthesia and fetal intrapartum oxygen saturation, 119–125
- Regionalization of neonatal care, ventilation facilities in Illinois and Wisconsin, 197–202
- Regression analysis, perineal tear risk factors, 225–233
- Renal failure, hypertensive disorders of pregnancy, postpartum renal failure and pancreatitis, 177–179
- Renal pelvis rupture, case report and literature review, 189–194
- Respiratory distress syndrome (RDS)
- elective delivery and risk of, 81–85
  - fetal hydrops and familial pulmonary lymphatic hypoplasia, 323–330
- functional residual capacity (FRC) and surfactant response in preterm infants, 155–161

- Respiratory distress syndrome (*cont.*)  
 primary fetal hydrothorax, double basket catheterization, 405–410  
 pulmonary interstitial emphysema (PIE), CT imaging, spontaneous breathing in preterm infant, 285–289
- Retroperitoneum, pregnancy-related vascular emergency, 241–246
- Risk factors  
 meconium aspiration, delivery room risk factors, 367–376  
 neonatal clavicular fracture, 17–21  
 neonatal group B streptococcus (GBS) disease, prevention strategies, 341–347  
 perineal tear, 225–233  
 placental abruption, reproductive risk factors, Doppler findings, population-based analysis, 451–458
- Screening techniques, neonatal group B streptococcus (GBS) disease, prevention strategies, 341–347
- Serum uric acid, multifetal gestation, effect on maternal concentrations, 291–295
- Smoking mothers, neonatal polycythemia, partial exchange transfusion, 349–353
- Social attitudes, Down Syndrome children, 99–107
- Soluble ICAM-1 (sICAM-1), neonatal and maternal serum levels, preeclampsia and normal pregnancies, 333–339
- Standards of medical care, ventilation facilities in Illinois and Wisconsin, regionalization of neonatal care and, 197–202
- Staphylococcus aureus*, endocarditis in preterm neonates, 247–251
- Staphylococcus epidermidis*, parotid swelling in premature neonates, 435–437
- Stillbirth, umbilical cord knots, clinical significance, population-based analysis, 127–131
- Stress management, family reactions during infant NICU hospitalization, 205–213
- Suppurative parotitis, parotid swelling in premature neonates, 435–437
- Surfactant replacement, functional residual capacity (FRC) in preterm infants and response to, 155–161
- Survival rates  
 extreme prematurity, management trends, 9–14  
 laryngotracheo-esophageal cleft (LTEC) repair, 181–186
- Syringomyelia, maternal Arnold-Chiari type I malformation, labor management issues, 445–448
- Systemic lupus erythematosus (SLE), fetal echocardiographic screening in anti-Ro and/or anti-La antibody mothers, 73–77
- Thracoamniotic shunting, primary fetal hydrothorax, double basket catheterization, 405–410
- Thrombophilia, Factor V Leiden mutation, pregnancy complications, 37–45
- Thyroid function testing, transient hypothyroxinemia of prematurity (THOP), abnormal ultracranial ultrasound and illness severity, 139–146
- Tobramycin, dosing regimens, extended interval vs. traditional multiple daily dosing, 413–418
- Tocolysis, magnesium sulfate therapy, breast engorgement and galactorrhea, 239–240
- Tracheal agenesis, case studies and literature review, 395–399
- Tracheal meconium, meconium aspiration, delivery room risk factors, 367–376
- Transfusions, neonatal polycythemia, partial exchange transfusion, maternal smoking and, 349–353
- Transient hypothyroxinemia of prematurity (THOP), abnormal ultracranial ultrasound and illness severity, 139–146
- Type I diabetes mellitus, in mothers, perinatal mortality, 169–175
- Ultrasound  
 amniotic fluid dynamics, isolated oligohydramnios, 253–263  
 intrauterine growth restriction diagnosis, comparative analysis, 133–136  
 needle aspiration of neonatal cranial epidural hematoma, vacuum extraction complication, 401–404  
 transient hypothyroxinemia, abnormal ultracranial ultrasound and illness severity, 139–146
- Umbilical cord blood, neutrophils, apoptosis and response to colony-stimulating factors, 427–432
- Umbilical cord knots, pregnancy outcome, population-based analysis, 127–131
- Unlicensed medications, neonatal intensive care unit (NICU), prospective studies, 67–72
- Uterine abnormalities, intrauterine synechiae, doppler velocimetry assisted diagnosis, 421–424

- Vaccines, varicella immune status in obstetric population, place of birth and, 387–393
- Vaccuum extraction complications, neonatal cranial epidural hematoma, ultrasound-guided needle aspiration, 401–404
- Varicella immune status, obstetric population, place of birth and, 387–393
- Varicella zoster virus (VZV), immune status in obstetric population, place of birth and, 387–393
- Vascular disease, pregnancy-related vascular emergency, 241–246
- Venous thrombosis, Factor V Leiden mutation, pregnancy complications, 39–45
- Ventilation techniques, laryngotracheo-esophageal cleft (LTEC) repair, survivor studies, 181–186
- Vertebral anomalies, neonatal pneumoperitoneum and vertebral anomalies, gastric duplication cyst presentation, 361–365
- Very low birth weight (VLBW) hepatoblastoma and, 149–152
- Staphylococcus aureus* endocarditis in preterm neonates, 247–251
- transient hypothyroxinemia of prematurity (THOP), abnormal ultracranial ultrasound and illness severity, 139–146
- Vomiting. *See* Nausea and vomiting
- White matter lesions, perinatal asphyxia and periventricular white matter lesions, protein S-100 serum levels, 317–321
